Job Description: Associate Scientist – Formulation Research

Responsibilities:

We are looking for a highly motivated individual with a Bachelor’s degree in chemistry, engineering, biology, or physics. The successful candidate will join BASF’s Formulation Research group located in Tarrytown, NY. This group is an integral part of BASF’s Advanced Materials and Systems Research. Day to day activities will involve developing novel proof-of-concept type formulations for industrial related applications. The individual will work on highly interdisciplinary project teams with defined targets and milestones. This position will also require close interaction with different BASF research groups and businesses on a global level. In addition, the team maintains and supports numerous collaborations with non-BASF partners, including universities and other organizations.

Requirements:

- Bachelor’s degree in chemistry, engineering, biology, physics, or related field with a minimum of 1 year of related experience
- Experience with formulations, microfluidic technology, or encapsulation preferred
- Hands-on experience with laboratory methods and analytical instrumentation
- Good understanding of general chemistry and organic chemistry
- Strong analytical and problem-solving skills to interpret data and results
- Maintain laboratory documentation in accordance to required scientific, regulatory and intellectual property requirements, write reports, prepare and communicate with presentations
- Capable of working as part of a multi-disciplinary team environment utilizing shared resources under challenging time limits
- Excellent organizational, interpersonal, teamwork and communication skills
- Continually develop skill sets for new technologies and methods by being innovative with a strong entrepreneurial drive
